SUMMARY

Backend and AI-infrastructure engineer — Go, LLM evaluation tooling, and peer-reviewed research. Software engineer at UBS.

SKILLS

Languages:	Python, Go, TypeScript, SQL, Bash, Kotlin
AI & LLM:	LangGraph, RAG (ChromaDB, HuggingFace embeddings), Transformers.js & Whisper, LLM evaluation harnesses, OpenRouter / Ollama APIs
Backend & Infra:	FastAPI, Express, Chi, PostgreSQL, SQLite, Prisma, sqlc, Docker / Compose, MinIO (S3), OpenTelemetry, Prometheus, Grafana, Playwright
Frontend:	React, Vite, Tailwind CSS

EXPERIENCE

UBS — Hyderabad, India

Software Engineer — *Aug 2026 – Present*

- Built frontend end-to-end test coverage for an internal sensitive-data document-scanning platform using **Playwright** across **15 critical flows**, wired into the team's CI pipeline.
- On a new team, building automation for the end-to-end VM-provisioning process — raising tickets, invoking Amelia automations, and calling internal server APIs to create machines. Provisioned the project's **Postgres** database and set up its test pipeline.

Software Engineering Intern — *Jan – Jul 2026*

- Instrumented the document-scanning service (a platform handling ∼9,700 scans/month) using an OpenTelemetry-based internal library, and built the **Prometheus + Grafana** dashboard used to monitor it.
- Built a remediation-notification service (internal Microsoft Teams bot wrapper + email API) that queries remediated findings and each user's last-notified state from the database and routes alerts to the correct owner.

PUBLICATION

Menon, B. K., **Deshpande, T.**, Pal, A., & Kothandaraman, S. (2025). "Critical regions identification and coverage using optimal drone flight path planning for precision agriculture." *Results in Engineering* (Elsevier), 104081. doi:10.1016/j.rineng.2025.104081 — **16 citations**

- Co-authored a peer-reviewed pipeline combining image pre-processing, **K-means** clustering and **2-opt** TSP heuristics for drone coverage routing, reporting a **22–46%** runtime improvement over baselines.

PROJECTS

TaskTide — Distributed workflow platform

Go, PostgreSQL, MinIO/S3, React, Docker — github.com/tanmayd-dev/TaskTide

- DAG workflows designed in a drag-and-drop editor and executed across a self-registering worker fleet, with dependency-aware scheduling via topological sort and unblocked-task queries.
- Persists workflow/task state in Postgres (sqlc + goose migrations), passes task data as files through MinIO/S3, and deploys with a single Docker Compose command.

brickbench — LLM debloat-safety evaluation harness

Python, SQLite, ADB / Android emulator — github.com/tanmayd-dev/brickbench

- Applies LLM-proposed Android debloat plans to a booted emulator snapshot and verifies them with functional probes; results are **SHA-256** hashed for reproducibility.
- Uses a semaphore-gated emulator pool with atomic run claiming so parallel workers never double-execute, and feeds verified verdicts into a learned safe-list.

ai-workflow-platform — Governed AI workflow platform

FastAPI, LangGraph, ChromaDB, SQLAlchemy — github.com/tanmayd-dev/ai-workflow-platform

- LLM-assisted workflow drafting over an uploaded regulatory knowledge base (RAG), with deterministic rules making the final decision and a replayable audit trail.
- JWT + RBAC authentication, immutable versioned workflows, and account-level run serialisation.

EDUCATION

Vellore Institute of Technology — Chennai, India

B.Tech, Computer Science & Engineering (AI & ML) — *2022 – 2026*

GPA: 8.49/10

ADDITIONAL

Microsoft Certified: Azure AI Fundamentals (**AI-900**) · Languages: English, Hindi, Marathi
